North Powys Wellbeing Programme

Model of Care

Live Document

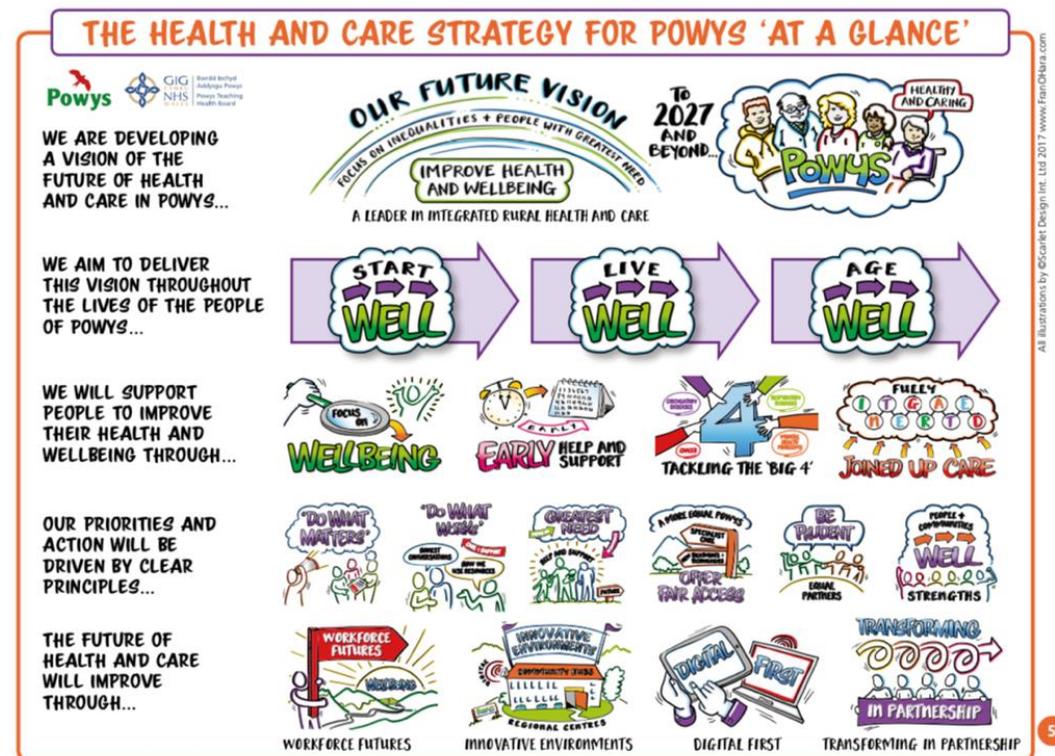

Introduction

This model of care for Powys is part of a Wales-wide response to the increasing demands and new challenges facing the NHS and social care. These include an ageing population, lifestyle changes, public expectations and new and emerging medical and digital technologies.

In June 2018, the Welsh Government published 'A Healthier Wales: Our Plan for Health and Social Care'. The ambition of *A Healthier Wales* is for the health and social care systems to work together, to help people live well in their communities, meet their health and care needs effectively and provide more services closer to or at home, so that people only need to use a hospital for treatment that cannot be provided safely anywhere else. The new model of care sits under the overarching *Health and Care Strategy for Powys: A Healthier, Caring Powys*.

We asked the local community and people who provide services, both in and out of the county, to tell us 'what works well' and 'what could be improved in the future'. To help focus our conversations we looked at how we deliver services in three distinct ways:

- At home and in the community
- At a district or regional level
- At a county or out of county level.

We have initially focused conversations in north Powys and have discovered people are enthusiastic about transforming health and care services in north Powys, in part by delivering more services in-county, closer to where people live.

In developing the model of care, we took care to keep a balance between ambition and reality. This will help us deliver meaningful change, within the boundaries of what we can realistically achieve. As we develop more detailed plans, we will test our ability to deliver the new model, continue to share information, ask for feedback and explain the reasons behind our decisions.

What we know now

Powys is a large, rural county. It covers a quarter of the land mass of Wales and is the most sparsely populated county in England and Wales, with a population density of just 26 people per square kilometre. More than half of the county's residents live in villages and small hamlets.

The geography of the county presents a challenge in delivering services, especially health and social care services. Many people tell us that, although they do not want to leave their community, access to services and social isolation is a problem, in particular those who are older and live in more remote locations.

- Evidence shows that people who live in the most deprived areas in Powys live more years in poor health compared to people in the least deprived areas. Evidence shows that the difference in cognitive outcomes between children from the least and most deprived areas continues to grow over 10 years. Across Wales, there is also a clear link between levels of deprivation and rates of overweight or obesity, from 28.4% of children who live in the most deprived areas being overweight or obese to 20.9% in the least deprived. Just over 1 in 5 children in Powys are estimated to be living in poverty, after housing costs have been considered. Children who grow up in poverty are more likely to have poor health which can have an effect on the rest of their lives. In North Powys there are some areas which score high on several factors associated with the Welsh Index of Multiple Deprivation (WIMD). Health inequalities increase when services do not reach those who are at most risk. this can be reduced when services work together with a focus on early intervention, adverse childhood experiences, wellbeing and independence.

- Unhealthy lifestyles increase demand on health and social care services and reduce people's opportunity to live a fulfilling life. Although rates of physical activity in Powys are above the Wales average, nearly 6 in 10 adults are overweight or obese and this figure is predicted to rise. Just under 1 in 5 adults in the county smoke and 4 in 10 drink more than the recommended amount.
- Developments in technology are changing how we provide some health and social care services and support. For example, more people can access services in or closer to home. Although we have started to use new technologies, there is much more we can do.
- Population changes mean there will be more older people and fewer younger people living in Powys in the future. And while people are living longer, these years are not always healthy. New treatments are being developed, which could help more people live for longer, but they are costly. To be able to meet future demand we must change the way we deliver services, so they are affordable and sustainable.
- Services around the county's borders are changing. The Shrewsbury and Telford Hospital NHS Trust, the main acute hospital provider for many north Powys communities, are changing their services which means some services will move to Telford. Every year approximately 5,000 people travel out of county each year for day case procedures and 60,000 for outpatient appointments, if we had the right workforce, facilities and diagnostics a large number could be provided locally.
- We have started to talk to our partners in the Mid Wales Joint Health and Social Care Committee about how we can provide more services locally that are currently provided in hospitals, and will be starting more detailed work on this over the next 12 months, this will reduce people's travel costs and time.
- We depend on volunteers to deliver care and are fortunate to enjoy strong support for this. However, to maintain levels of care we must improve how we support our volunteers and continue to recruit new ones.

By 2027 we want people who live in Powys to say...

- I am responsible for my own health and wellbeing.
- I enjoy a range of opportunities which mean I am able to lead a fulfilled life.
- I have easy access to information and advice that helps me make healthy lifestyle choices for myself and my family.
- I enjoy health and wellbeing through support from my local community and access to the natural environment.
- I receive support which helps me balance my responsibilities as a carers and enjoy a fulfilled life.

- I am confident my children have opportunities that help give them the best start in life.
- I have easy access to information, advice and support that helps me live well with my chronic condition.

- When I need to, I can access services as near to my home as possible.
- I am treated with dignity and respect.
- I receive care and support which is focused on what matters most to me.
- I receive continuity of care which is safe and meets my needs.

- I have easy access to information and support about my condition.
- My condition was diagnosed early.
- After my diagnosis I received treatment quickly.
- I continue to receive high-quality treatment and support as near to my home as possible.

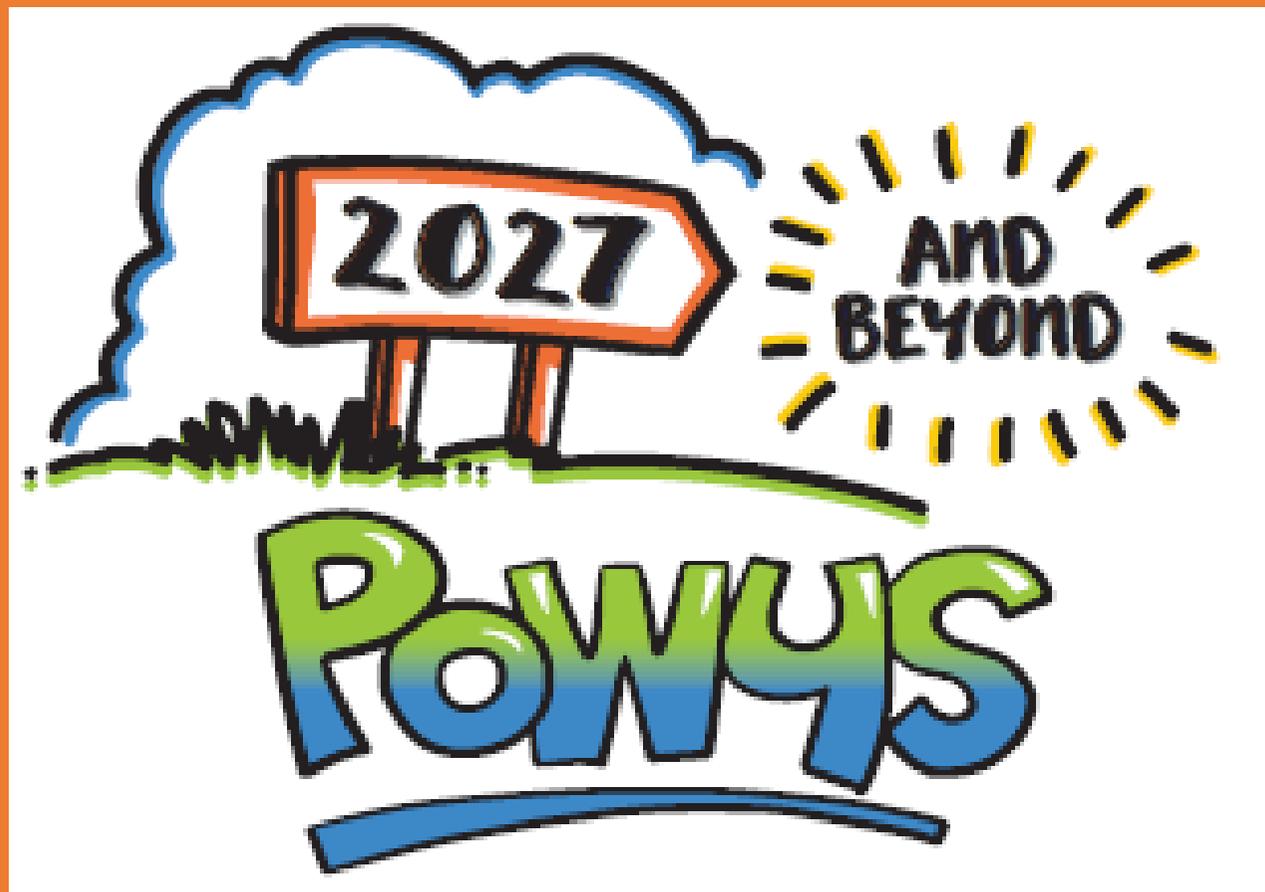

Those who provide health and care services in Powys will:

- Listen to the people of Powys about their hopes, fears and opinions on health and care services.
- Provide care which meets the needs of the individual and helps them manage their own care budget.
- Influence housing, education, leisure and in-work poverty to reduce health inequalities.
- Help communities develop hubs and activities that encourage cultural wellbeing, physical activity and social interaction.
- Encourage people to develop a wellness plan, be aware of the impact of their lifestyle and act when the time is right.
- Improve access to services, provide better screening and early diagnosis and help and support.
- Make the most of the opportunities that developments in technology bring to improve communication, deliver new services and provide services at more convenient times.
- Work to the sustainable development principle under the Future Generations Act's Five Ways of Working to develop sustainable services and promote the Welsh language.
- Deliver services as close to people's own homes as possible to save people time and money and reduce carbon emissions. People will only need to travel out of county to receive specialist care and complex services which we cannot safely provide through digital technology or closer to home.

If you live in Powys, we ask you to:

- Be proactive in supporting your own health and wellbeing and be an expert in managing your own care.
- Be an equal partner in the decisions that are made about your care and support.
- Take action to maintain good health and wellbeing, through participating in physical activity, looking at information, advice and guidance attending screening, utilising self-referral and educational programmes, using digital apps where you feel comfortable to do so.
- Support activities that help people feel part of their community and able to take part in making decisions about what matters to them.
- Act as a champion to help develop integrated community hubs that bring people and communities together.
- Use digital technology to support your independence and help you receive prompt care and support.

What the model will look like: 2027 and beyond

Evidence tells us that...

- People enjoy better health and wellbeing when they are active partners in their own care.
- Education is a key way to encourage positive lifestyle behaviours in people of all ages.
- Encouraging children and young people to live healthy lifestyles now helps them live more healthily in the future.
- A positive working environment and well-paid work that people can take pride in helps create social and economic wellbeing.
- A positive living environment, including good-quality housing, affordable heating and easily accessible local amenities, helps people enjoy good health and wellbeing.
- Services are most effective when they are universally accessible but reflect differing need.
- Targeted health promotion and disease prevention in deprived communities and through schools helps reduce the impact of the 'Big 4' diseases – mental health, respiratory, circulatory disease, cancer.

Key focus of the model:

- Promote independence and self-care where possible.
- Use digital and traditional paper-based channels to publish and share information about community wellbeing activities to help people engage with local groups and establish the friendships and social networks that are essential to maintain resilient communities.
- Utilise voluntary sector and social networks and increase green and social prescribing so that people can take part in more community-based activities to improve their health and wellbeing.
- Provide one-stop, universal and targeted early and primary prevention services at integrated community hubs that bring together education, welfare, housing, leisure, health, social care and the third sector.
- Support an active travel infrastructure (where appropriate) to encourage people to choose active travel and reduce their carbon footprint.
- Help people achieve a healthy weight through, for example, access to dietetics, behavioural change approaches and physical activity specialists.
- Influence housing, education, leisure and in-work poverty to improve health outcomes and reduce inequalities.
- Provide opportunities for employment, training and career progression that help people stay living and working and Powys, enjoy job satisfaction and increased wellbeing, and contribute to the growth of the local economy
- There will be a broader approach to delivering behavioural and clinical risk factor management programmes, e.g. through the use of community venues and the use of digital technology.
- Ensure a skilled, supported workforce equipped to provide a high-quality service to children, young people and their families, which is compliant with the legislative framework and in line with best practice.

Evidence tells us that...

- Inequalities experienced in childhood affect people's outcomes in later life. For example, children who experience disadvantage are more likely to adopt harmful behaviours which can lead to mental illness, cancer, heart disease and diabetes. When we work together we are more likely to provide families with the right support at the right time.
- People with long-term conditions account for around 50% of all GP appointments and 70% of inpatient bed days. When they take part in health promotion and disease prevention activities, these people can benefit from a long-term reduction in their disease burden. Where people with long-term conditions need ongoing support, multi-agency intervention can help them stay at home for longer and only go into hospital when there is a clear need.
- Early screening and diagnostic testing and quickly establishing care pathways can reduce the long-term burden of disease. When people have help to adopt a healthy lifestyle and access mental health support they can change their behaviour and further reduce the long-term burden of their disease.

Key focus of the model:

Give children the best start in life

- Recognise the importance of the first 1000 days of a child's life and provide activities that help children gain resilience as they move into adulthood.
- Public sector childcare to help families return to work.
- Good-quality childcare and early years parenting and transition to school programmes so that every child starts school ready to learn.
- Support to children to ensure they reach their full potential at school.
- Better access to wellbeing activities and green spaces.
- Early intervention, multi-agency services for families who are most in need so that more children who are at risk stay at home and fewer children are placed in care.

Help communities become self-sustaining and more resilient

- Ask people what matters to them and help them draw on their own strengths and the support available to them in their community to reduce the need for statutory interventions.
- Utilise public buildings so we have more facilities from which communities and providers can bring children, young people and adults together to share skills and experience through a wide range of intergenerational activities.
- Offer consistent and equitable services at home and in the community.

Support people with long-term conditions to live well

- Monitor people's lifestyles so we can target resources to meet need and reduce the impact of clinical and social risk factors.
- Identify people who are at risk of developing a disease; providing prompt local diagnosis, one-stop services (including counselling and psychology) and support at home.
- Expert patient programmes and advanced care planning so people can support themselves and manage any urgent interventions to reduce hospital admissions.
- Give people the support, care and equipment they need to live as independently as possible.
- Help clinicians and professionals with specialist interests work together to improve local services through more integrated approach across multi-agencies.

Evidence tells us that...

- Multi-agency assessment and holistic, personalised care can reduce duplication, eliminate gaps in service provision, address equity issues and ensure the needs of an individual are shared, understood and met in a timely way.
- There is a direct correlation between how long a patient stays in hospital and their subsequent admission to nursing or residential care.
- People can stay living independently for longer when they spend less time in hospital and receive appropriate care and support at home.
- Changing demographics mean demand for complex health and social care packages will go up in the future.

Key focus of the model:

- Multi-agency working across education, housing, welfare, emergency and primary, community and secondary healthcare services to provide a seamless health and care service.
- People involved in making decisions about their care so that the services we provide are focussed on what matters most to them.
- 24/7 multi-agency urgent care in the community for people who do not need to attend an emergency department or be admitted to hospital.
- Ambulatory care (outpatients, day case, urgent care, diagnostics) as locally as possible so that people receive a prompt diagnosis and easy access to treatments.
- Local accommodation so that fewer children and adults are placed out of county.
- Co-ordinate care to prevent unnecessary hospital admissions and help people return home as soon as possible after a necessary admission.
- Encourage more people to complete advance care planning, so that they can choose whether they would like to receive end of life care at home or in a community setting.
- Support people with complex needs to live independently for as long as possible and, when it is no longer possible, to have prompt access to residential care.
- Reablement services that help people quickly regain as much independence as possible.
- Personalised care as soon as it is needed through anticipatory care planning and individual budgets.
- Work with children, young people and their families to co-produce plans and make the changes children need as quickly as possible.
- Flexible and affordable mix of high-quality placements for children who are looked after that meet their individual needs and keep them as close to home as possible.
- Good parenting programmes, specialist support and well-planned journeys into adulthood so that children in care achieve the best possible outcomes.
- Make sure every person who needs one has easy access to a keyworker.
- Support people to take a positive and risk aware approach to life.
- Make sure people have clear information before and throughout any statutory involvement, in a format they can access and understand and that contains key contact details, their current situation and the next steps that are planned.
- Where it is safe and effective to do so, provide specialist services in-county.

Evidence tells us that...

- Good mental health improves people's overall life chances including their education, home life, employment, safety, physical health, independence and life expectancy. Integrated, multi-disciplinary and multi-agency services that are easy to access help people enjoy good mental health and wellbeing.
- Although new treatments have resulted in better survival rates, cancer incidence rates and the demands on services continue to rise.
- Early identification of people who are at risk of developing diabetes, respiratory or circulatory diseases and musculoskeletal disorders will help to prevent incidence and reduce their long-term disease burden.

Key focus of the model*:

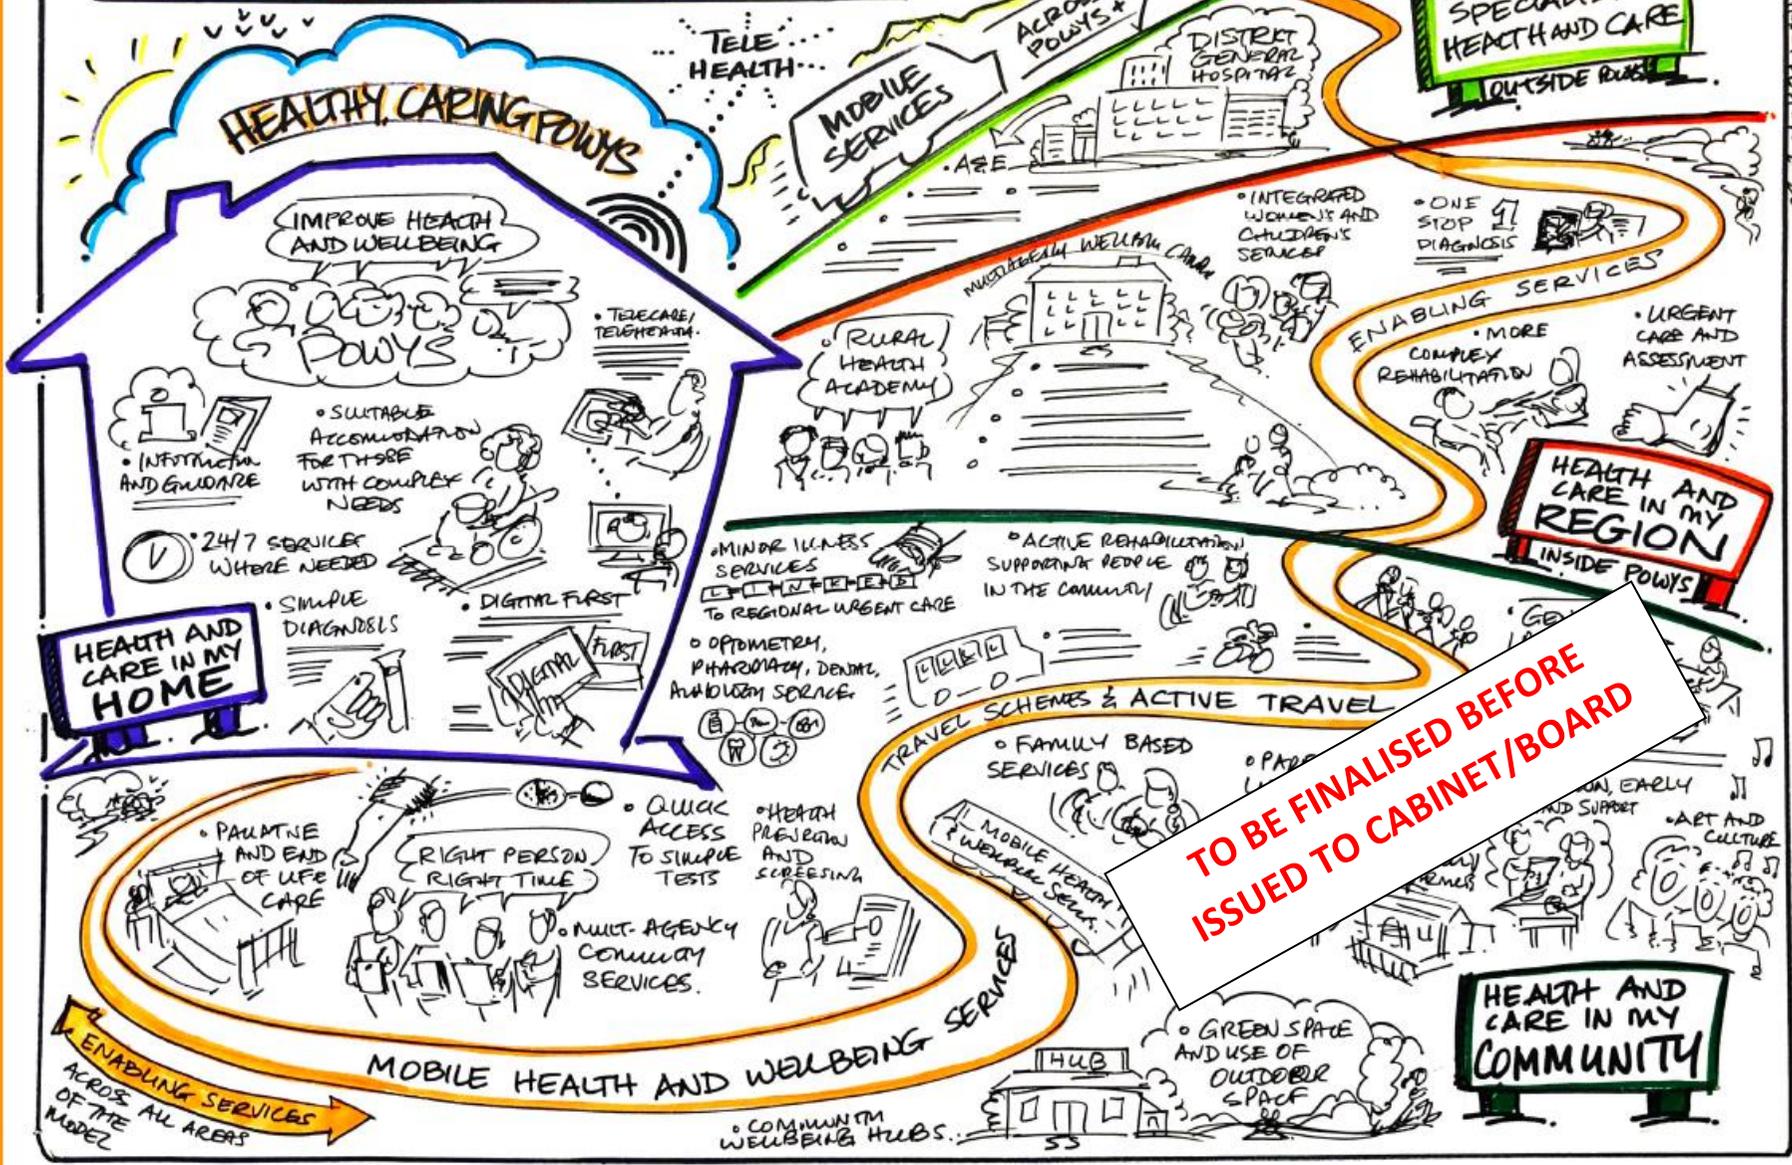

- Use information and intelligence to better understand future needs at population level and so deliver better value services.
- Encourage people to reduce behaviours that contribute to incidence of the Big 4 (smoking, poor diet, physical inactivity, stress) with a particular focus on the health board and council as significant employers in Powys.
- Better identify and manage key clinical risk factors: high blood pressure, high cholesterol, high blood sugar.
- Reduce incidences of the Big 4 through better education and healthier work and lived environments.
- Make screening easy for people to access and ensure they are well informed about why they have been invited to attend screening and the importance of doing so.
- Use agreed pathways to address the Big 4 and improve outcomes based on national planning guidance and evidence.
- Remove the stigma around mental illness so that people who live with it are understood and valued in their community.
- Integrate mental and physical health services.
- Dementia friendly communities and a focus on community resilience and support for people with dementia.
- Provide intergenerational opportunities between school children and people who live in an EMI residence or attend a day centre.

*Big Four: Mental Health, Respiratory, Circulatory and Cancer

THE MODEL OF CARE FOR POWYS

© SCARLETT DESIGN 2020

Delivery model

Services and support for people at **HOME**

- Information about wellbeing services.
- Video consultations with GP or hospital consultant.
- Good-quality, affordable accommodation to help people live healthily and independently.
- Assistive technology and digital applications to help people self-care and live independently.
- Some diagnostics and test results, carried out and shared electronically.
- Stronger communities with local groups to support people's wellbeing at home

- The right support at the right time, including 24/7 services where needed and available, so people can stay living at home and avoid unnecessary admissions to hospital or residential care.
- Targeted services for disadvantaged families delivered by multi-agency, multi-disciplinary teams.
- Digital applications that help people manage their long-term conditions; improved access to community resources for people who do not want to use technology.
- Mobile health and wellbeing services including simple diagnostics such as bloods and glucose levels.
- Easy access to equipment, aids and adaptations that help people stay living at home, at all ages.

Mental Health

- Support through online cognitive behavioural therapy for people with depression, anger, stress, anxiety and perinatal illness.
- Crisis management and interventions seven days a week through a dementia home treatment team.
- Mental health services and treatment, as soon as people need them.

Respiratory Disease

- Technology that allows people to monitor their own condition.
- More support for people with complex conditions.

Circulatory Disease

- Technology that allows people to monitor their own condition.
- More support to rehabilitate people who are recovering from a stroke.

Cancer

- More support and advice from third sector services.
- A link worker who will ensure the services people receive are coordinated and meet their needs.

- Support to transfer from acute care to home so people can regain their independence as quickly as possible.
- More hospital at home services (e.g. intravenous antibiotics, heart failure follow-up, palliative care, pulmonary rehabilitation) so people can avoid hospital admissions and stay living at home, or return home more quickly following a hospital admission.
- Suitable accommodation for children, young people and adults who have complex needs.
- Prompt access to short-term accommodation and, for people who are able to return home, help so they can do so as soon as possible.
- Respite care, as soon as people need it.
- Palliative and end of life care.
- Residential care for children, young people and adults with mental health and learning difficulties, as close to their community as possible.

Services and support for people in the **COMMUNITY**

- Community wellbeing hubs that provide wellness services such as intergenerational activities, independent living projects, green and social prescribing, healthy living activities and services that focus on the early years, education and employment.
- Community champions and key link workers who will help people access information, advice and support.
- A consistent point of contact who will coordinate services for vulnerable families and those facing difficulties.
- First aid awareness and training to help communities support themselves.

- Multi-agency, multi-disciplinary services for children and young people, delivered at school and in other community settings.
- Access to optometry, pharmacy, dental and audiology services in community settings.
- Respite care, as soon as people need it.
- Simple diagnostics and testing at home or in a community setting.
- Professionals who will help people connect with others in the community and the range of services available to them.
- Access to GP services through clinical triage which will assess people's needs and signpost them to the right person at the right time.

Mental Health

- Support for people with less complex needs through primary care workers in general practice and third sector organisations.
- Support for people with more complex needs from community teams in Newtown, Welshpool and Machynlleth.
- Mental health services from an all-age, multi-agency, multi-disciplinary mental health team.
- Dementia friendly communities.

Cancer

- A wide range of screening, support and services, including palliative care suites, close to where people live.

Respiratory

- Multi-agency, multi-disciplinary teams who will identify people at risk of developing a respiratory disease and provide prevention and early intervention services.

Circulatory

- Multi-agency, multi-disciplinary teams who will identify people at risk of developing a circulatory disease and provide prevention and early intervention services.

- Step up and step down reablement and rehabilitation services to help people avoid unnecessary hospital admissions and, where they do need to be admitted, help them return home as soon as possible.
- Minor injuries and illness services linked to an urgent care centre via GP practices.
- Pre and post-operative care for people with less complex needs, close to where they live and with links to consultants in acute hospitals.
- GP-based virtual wards that include social care and third sector agencies to help identify vulnerable patients and frequent users of health and social care services, stratify their risk and prevent their needs from escalating.
- Easy access to a one-stop, multi-agency, multi-disciplinary clinic.

Services and support for people in the **REGION**

- A multi-agency safeguarding hub.
- Advice and support for people who need advanced levels of care to help them live a healthy lifestyle.
- Technology that will give people access to community wellbeing hubs across Powys.

- Multi-agency support for children, young people and families via dedicated hubs.
- Integrated, multi-disciplinary teams, via a one-stop call centre.
- A wide range of diagnostic services so that people receive an early diagnosis and treatment as locally as possible.
- Ambulatory care services, outpatient consultations and some surgical and medical day case treatments, including chemotherapy and transfusions.

Mental Health

- 24/7 care for a maximum of three days at a crisis house for people who have urgent needs but who do not need to be admitted to an inpatient facility.
- Integrated disability, mental health and alcohol and substance misuse teams.

Cancer

- Outpatients appointments, breast cancer diagnosis and non-complex chemotherapy.

Circulatory

- One-stop clinics to diagnose conditions and provide services including psychology support and stroke rehabilitation.

Respiratory

- One-stop clinics to diagnose conditions and provide services including psychology support.

- Intensive rehabilitation service for people who have suffered a major trauma or stroke.
- Enhanced women's and children's services.
- Urgent care assessment within 0-4 hours and 24/7 out of hours support, where people meet agreed criteria and a multi-disciplinary team is present.

Services and support for people **OUT OF COUNTY**

National wellbeing campaigns:

- Immunisations
- Smoking
- Weight-related illness
- Alcohol
- Substance misuse
- Pollution
- Awareness of the 'Big 4'
- Physical activity

- Children's medical and surgical day case procedures.
- Complex outpatient appointments which require specialist diagnostic tests and support from multi-disciplinary teams which cannot be staffed in Powys.
- Complex birthing, antenatal and postnatal care.
- Specialist diagnostics such as CT and PET scans.

Mental Health

- Specialist inpatient services in Llandrindod or Shrewsbury.

Cancer

- Complex cancer treatments including chemotherapy and radiotherapy, diagnostics and surgery.

Circulatory

- Complex investigations and diagnostics.
- Inpatient services for stroke and heart disease.

Respiratory

- Complex investigations and diagnostics.
- Inpatient services.

- Acute and specialist inpatient medical and surgical care.
- Specialist / Tertiary commissioned services.
- Accident and emergency services including complex acute ambulatory care and assessment.
- Major trauma services.

Changes we expect to see in North Powys

Where we are now	Our Ambition by 2027
Majority of people receive diagnostics and ambulatory care out of county.	Significant increase in diagnostics, outpatient and day case treatments in-county
Most children receive paediatric diagnostics, outpatient and day case treatments out of county.	Small increase in children receiving paediatric diagnostics and outpatients in-county. Due to specialist skills most children will continue to receive complex diagnostics, outpatients, day case care out of county.
Majority of people receive specialist care out of county.	Where safe and effective to do some care will be provided in county or via digital mechanisms.
People receive rehabilitation services in a mix of acute and community settings.	Increase in reablement and rehabilitation at home and in the community.
People travel to Cardiff or Stoke for complex rehabilitation services.	To provide this service in Powys for the population of mid Wales.
People receive the majority of their cancer diagnostics and treatments out of county.	People needing less complex cancer diagnostics and treatments can receive these at the Rural Regional Centre or, where possible, in their home.
Individuals and families can access different services to support them at home depending on where they live.	All individuals and families can access the same services to support them at home and when needed these are accessible 24/7.
A small number of people can access urgent care at home or in a minor injuries' unit.	More people can access urgent care at home, community and Rural Regional Centre.
Some people have access to technology that helps them self-care and live independently.	Most people who need it have access to technology that helps them self-care and live independently.

A large number of adults and children receive care through statutory services.

Fewer adults and children access statutory services. Individual and family needs are supported through early help and support teams, reducing the need for people to go into the care system.

Demand for health and care services is rising.

Prevent demand from growing in the longer term by investing in prevention and early intervention that enables people to live in good health.

Personas – North Powys only

Start Well Persona 1: Today

Andrew is a typically lively 13-year-old boy who lives in Newtown with his mother and father. He has one older brother who has recently left home for university. Andrew has a healthy lifestyle, enjoys outdoor activities and makes use of his local library in Newtown. Both his parents work. The family has one car.

Andrew has suffered with enlarged adenoids since he was about 10. They cause him discomfort and interfere with his breathing which affects his daily life, particularly when he wants to take part in physical activity. His enlarged adenoids also mean he suffers from frequent middle ear infections which have caused him to have some time off school. Although this hasn't affected his academic performance, it does affect his parents who have occasionally had to take unpaid leave from work at short notice.

Andrew's GP referred him to an ENT specialist at the Royal Shrewsbury Hospital. Before his appointment, the consultant asked Andrew to complete a sleep study which meant his mother had to drive to Shrewsbury to collect the study equipment and then drive back to return it the following day. After the appointment Andrew was advised he would need to undergo an adenoidectomy. He had a pre-operative assessment in Telford which found he was fit for the surgery. However, it was postponed several times and now more than six months have passed which means his pre-operative assessment has expired and he will have to travel back to Telford for another one.

These delays have caused Andrew great upset as he has not been able to take part in the outdoor activities he enjoys. The visits to and from Telford have also been difficult for his mum and dad who have had to take time off work, sometimes unpaid, which has occasionally left their household finances a little short.

Andrew is still waiting to have his surgery.

Start Well Persona 1: in 2027

Andrew is a typically lively 13-year-old boy who lives in Newtown with his mother and father. He has one older brother who is studying Adult Nursing at the Rural Health and Care Academy in Newtown. Andrew has a healthy lifestyle and spends a lot of time playing sport and taking part in outdoor activities in the green spaces near to his home. He also enjoys going to the library.

Andrew attends his local school where he receives an excellent education with an extended curriculum that teaches him how to maintain good physical and mental health and wellbeing. Andrew's parents both have meaningful employment in the area and enjoy a stable income. This is just one of the reasons they say their overall health and wellbeing is very good. The family has one car they use for shopping and trips out. Andrew's mum cycles to work on dedicated cycle paths and his dad walks.

Andrew has suffered with enlarged adenoids since he was about 10. They cause him discomfort and interfere with his breathing which affects his daily life, particularly when he wants to take part in physical activity. His enlarged adenoids also mean he suffers from frequent middle ear infections which have caused him to have some time off school. However, this has not affected Andrew's academic performance and his parents have flexible working arrangements which means they can easily take time off to care for him.

Andrew's GP referred him to an ENT specialist at the Rural Regional Centre in Newtown for Andrew's initial appointment. All his other appointments with the consultant have been held from Andrew's home using video conferencing technology. Before the consultant could confirm whether Andrew needed surgery, he had to undergo a sleep study. The equipment for this was available from the Rural Regional Centre in Newtown. After the study Andrew's consultant confirmed that he will need an adenoidectomy. He has since undergone a pre-operative assessment at the Rural Regional Centre, carried out by a nurse who recorded the assessment results on his electronic patient record. Everyone involved in Andrew's care has access to this record. Andrew was deemed fit for surgery and it is scheduled to take place in six weeks' time in Shrewsbury and Telford Hospital.

Live Well Persona 1: Today

David is a 26-year-old farmer. He lives alone in a remote location in Llanwddyn, one of the most sparsely populated areas of the county. His family live on another farm in Llanfyllin, north Powys. The family bought David's farm five years ago for the extra grazing land and so that David would have a home of his own and more independence.

Since moving to the farm, due to the demands of farming on his personal time and the farm's location, David has experienced rural isolation and a lack of social interaction. He has no mobile reception at home because the farm is in a valley and his broadband connection is via satellite which is costly and limited.

Because he has to work such long hours David rarely engages in social activities and can go days without seeing anyone. Before moving to the farm, he used to enjoy going to the gym and swimming pool at his local leisure centre. Now his nearest leisure centre is a 40-minute drive away in Welshpool. David also used to enjoy attending the Young Farmers Club. However, because of the demands of the farm he is finding it difficult to go back.

Sometimes David's only social interaction is with his extended family, and this is often just to talk about work and money. Cash flow concerns David and, while he wants to make his father proud and prove that he can manage a farm, market prices have been low and David is beginning to feel a sense of failure. He's struggling with the maintenance costs on several of the vehicles he needs to run the farm and because his farmhouse is rated Council Tax Band F, his council tax is high at £2,330 per year.

David often feels low in the evening and tends to work late because he is going back to an empty house where he has very little to do. He has also been suffering from aches and pains in his neck and shoulders for some time, which he has yet to seek treatment for.

Live Well Persona 1: in 2027

David is a 26-year-old farmer. He lives alone in a remote location in Llanwddyn, one of the most sparsely populated areas of the county. His family live on another farm in Llanfyllin, north Powys. The family bought David's farm five years ago for the extra grazing land and so that David would have a home of his own and more independence.

Since moving to the farm, despite the demands of farming on his personal time, David has been able to keep strong social connections and support networks. He attends a variety of local groups which he found out about after a quick search on his iPad. Although David lives alone in a rural area, he feels well connected via his reliable mobile phone signal and high-speed unlimited broadband.

David's close friends understand the pressures he feels to maintain the farm and often lend a hand when they have spare time. For example, David recently suffered from aches and pains in his neck and shoulders but was able to visit his GP before his health deteriorated because one of his neighbours offered to carry out his morning duties on the farm.

Before moving to the farm, David enjoyed going to the gym and swimming pool at his local leisure centre. Although his opportunities to use these facilities are now more limited due to the demands of the farm, David appreciates the acres of open countryside that surround him and uses the landscape to stay fit and healthy, both physically and mentally.

Live Well Persona 2: Today

Catherine is a 35-year-old woman who lives in Garthmyl, a few miles from Newtown. Some time ago Catherine discovered a lump in her left breast. She visited her GP who referred her to oncology at the Royal Shrewsbury Hospital where she was diagnosed with Stage 3 breast cancer, with 12 of her lymph glands also affected.

Catherine was then referred to the Princess Royal Hospital in Telford for a lumpectomy, which required an overnight stay. Her husband is a farmer and he found it very difficult to balance the demands of running the farm with supporting Catherine at her appointments.

When Catherine had recovered from her surgery, she had to go to the Royal Shrewsbury Hospital every three weeks for a course of chemotherapy. This made her feel extremely poorly, and she also felt exhausted from all the travel to and from appointments. On several occasions Catherine's temperature spiked after her treatment which meant she had to travel back to Shrewsbury to be admitted to hospital.

After her chemotherapy, Catherine had to undergo 23 sessions of radiotherapy. Although each session only lasted for 15 minutes, Catherine had to travel 40 miles each way to receive the treatment. This added to her exhaustion and affected her recovery.

Although Catherine has now finished her treatment she still has to travel to Shrewsbury for regular check-ups. She finds this difficult, particularly as some of the appointments have only involved a conversation which Catherine feels could have happened just as well over the phone.

Live Well Persona 2: in 2027

Catherine is a 35-year-old woman who lives in Garthmyl, a few miles from Newtown. Some time ago Catherine discovered a lump in her left breast. She visited her GP who referred her to oncology at the Royal Shrewsbury Hospital where she was diagnosed with Stage 3 breast cancer, with 12 of her lymph glands also affected.

Catherine was then referred to the Princess Royal Hospital in Telford for a lumpectomy, which required an overnight stay. Her pre-operative assessment was carried out locally at the Rural Regional Centre in Newtown. The nurse who completed this assessment recorded the results on Catherine's electronic patient record which can be accessed by everyone involved in her care. Although Catherine's husband is a farmer so works long hours, he found it easy to get help from friends and neighbours so he can support Catherine at her appointments.

When Catherine had recovered from her surgery, she attended the Rural Regional Centre in Newtown every three weeks for a course of chemotherapy. Because she could receive the treatment locally, Catherine found it easier to tolerate as she was not exhausted from travelling long distances and had more time in the comfort of her own home, close to her care network.

Catherine has now finished her treatment but still has regular appointments with her oncologist. Where possible these are held using a video link, so Catherine does not have to make any unnecessary journeys.

Age Well Persona 1: Today

Marie is a 65-year-old woman who lives in Machynlleth. She is an unpaid carer for her 87-year-old mother who has COPD and lives in a second floor flat in a sheltered housing complex near to the town centre. Marie also has a part time job at the local supermarket which she travels to on foot. She does not drive.

Marie's mother has become increasingly frail and short of breath recently and can no longer manage the stairs up and down to her flat, especially as she has to carry oxygen to help her breathe. This means she depends on Marie to do all her shopping and housework.

Recently, as Marie was leaving her mother's flat, she fell down the stairs and fractured her hip. As a result she spent a week in Bronglais Hospital. Since being discharged from hospital Marie has had to attend a weekly appointment at the fracture clinic. She sometimes struggles to get to this as it is not always easy to book hospital transport.

An elderly neighbour is doing some shopping for Marie's mother but there is no one to help with her care needs or housework. While Marie is comforted to know that someone is popping in to keep an eye on her mother, she is increasingly concerned about her lack of care. This concern is on top of Marie's other worries about keeping on top of her bills and potentially losing her job.

Age Well Persona 1: in 2027

Marie is a 65-year-old woman who lives in Machynlleth and works as a healthcare support worker. She used to be an unpaid carer for her 87-year-old mother who has COPD and is becoming increasingly frail and short of breath. This frailty is also affecting her mental health and her mood is changing for the worse.

Marie felt she could no longer meet her mother's needs and was relieved when she was able to move from her second floor flat into housing provision where she can receive the care she needs to keep her safe. Marie visits her mother regularly and they both enjoy spending time in the grounds around the care home. The trees and green spaces have a positive effect on both her mother's respiratory difficulties and her mood.

Marie recently fell and fractured her hip. She had to spend a short time in Bronglais but was discharged as soon as it was safe for her to return home. While Marie was in hospital and recovering at home she found it difficult to visit her mother, but they've kept in touch through video calls. This has given Marie peace of mind that her mother is safe and well. Marie's neighbours and friends have also helped her with shopping and cleaning while she recovers.

Marie was unable to work for a while after fracturing her hip but didn't worry as she received sickness pay so could keep on top of all her household bills. Her employers have been very understanding and have kept in touch with Marie, asking if there is anything they can do to help in her recovery.
